CORALWARD PRIVATE · FOR EXECUTIVES & HOMEOWNERS

Private AI at Home

The same discipline Mo brings to Hawaii's firms — for the house you run your life from.

Your home network now guards your banking, your business, your family's photos, and your front door. Coralward Private applies **twenty years of enterprise discipline** to the home — personally, discreetly, and handled by Mo, not a call centre.

The systems you run on

Your router & mesh Wi-Fi — eero, Google Nest, Orbi, UniFi — or the ISP gateway most homes never configure

Smart-home platforms — Ring and Nest cameras, smart locks, Alexa, Google Home, Apple HomeKit

Password managers — Apple and Google built-ins, 1Password, Bitwarden — one vault for the whole household

The home office — the laptop and file storage holding business, tax, and estate documents

Family devices — phones, tablets, school and gaming accounts — for kids and kūpuna alike

Home security systems — alarms and cameras whose footage and access codes are data too

Inside those systems: Banking and investment logins, the email account that resets everything else, tax returns and trust/estate documents, and camera footage and lock codes.

51% of organizations surveyed reported attacks **targeting their business leaders** in 2025 — up from 43% in 2023 — with home-network compromise among the most common consequences.

Where it can go wrong

- **The router is the front door** — outdated firmware, end-of-life hardware, and unchanged default passwords guard every device behind them
- **Gadgets hijacked before you notice** — the FBI warned in 2025 that millions of cheap home devices were compromised — some before they were even purchased — and used as criminal proxies
- **Scams that sound like family** — a few seconds of recorded audio is enough to clone a voice for a convincing "family emergency" call

What Coral Ward does

— **Home Cyber Audit** — router and mesh hardening, a default-password sweep, device inventory, and a separate network for smart devices

— **Family account protection** — one password manager, passkeys and MFA on email and banking, and a family safe-word rule for any money request

— **Private AI at home** — a small on-premise system that answers questions from your household, estate, and business documents — without uploading them anywhere

THE RULES YOU ANSWER TO

No law makes a household do this — the drivers are exposure, not regulation · **Cyber insurance is starting to ask** — personal cyber policies increasingly expect MFA, backups, and basic device hygiene · **Your company reaches into your home** — your home network is part of your company's perimeter

Begin with a complimentary discovery call

30 minutes with Mo — how AI is already being used in your business, and what it looks like done privately. No obligation.
